2026 PRODUCT GUIDE

GLYPHOSATE HYBRIDS

A NEW ERA FOR KENTLAND SEEDS

INTRODUCING OUR FIRST BRANDED HYBRIDS

We're proud to announce a major milestone in our journey—the introduction of our first Kentland Seed-branded corn hybrids, including options with glyphosate tolerance. After a successful soft start during the 2024–2025 growing season, these new offerings are now ready for a broader rollout—and we couldn't be more excited to share this achievement with you.

This launch marks more than just a product expansion. It represents years of dedication, research, and a deep commitment to offering our farmers even more tools to succeed. With the same trusted service and agronomic support Kentland Seeds is known for, these new hybrids bring:

- Expanded weed control options through glyphosate tolerance
- Strong agronomic packages designed for performance and consistency
- High-yielding genetics selected for adaptability and dependability
- The ability to choose from a wider spectrum of seed solutions—including conventional NON-GMO, certified organic, and now glyphosate-tolerant hybrids. In select regions, we also offer traited versions to meet specific agronomic and weed management needs, providing even more flexibility to match the right hybrid to your farm.

As we continue to grow, our focus remains the same: supporting farmers with top-quality products, trusted service, and agronomic expertise that meets you where you are.

Your success drives our innovation, and this new line is just the beginning of what's ahead. We're proud of what we've built—together—and even more excited for what's to come.

Customer Testimonial from Dennis Reick Ellsworth, WI

"I was very impressed with the fast emergence and excellent stand of G5144 this spring. It came up strong and looked healthy from the start. One of the reasons I like planting Kentland GT hybrids is the peace of mind it gives us during spraying. My son-in-law handles herbicide applications on our farm, and with the glyphosate tolerance in these hybrids, we don't have to worry about damaging the crop. Standability is one of the top traits I look for in a hybrid, and Kentland's products have delivered. I also really value the relationship I have with my sales rep and agronomist—he has earned my trust. I keep coming back not only because of the performance, but also the ongoing agronomic support and follow-up I get from the Kentland team. That kind of service really sets them apart."
